NEW! PEDAL ROCKER

WHERE COMFORT IS ESSENTIAL

- Residents can self propel and rock in the same chair! Excellent for those who are mobile that may be agitated and have a tendency to rock.
- Rocking motion helps to calm individuals and helps prevent wandering - Excellent for Alzheimers. Rocking also helps absorb rigid movements to aid in resident safety and comfort.
- 18° of infinitely adjustable tilt in space cradles the body helping to prevent slumping, sliding and falls without the use of restraints. It also provides exceptional comfort while helping to reduce pressure.
- Front pivot seat tilt allows for a proper foot on floor position for foot propelling while tilted - Encourages safe mobility and independence.
- Adjustable seat to floor height from 14" to 19" accommodates both short and tall residents.

Pedal Rocker with full padding package.

Resident can use rocking function independently of tilt (Rocking function shown)

NEW! PEDAL ROCKER

EXCELLENT FOR FALL PREVENTION

18° of seat tilt

Full seat tilt combined with rocking **33°**

BRODA[®] SEATING

Shown with optional mag wheels, clear tray and full padding with full upgraded vinyl seat and back.

When not self propelling, residents can use the tilt function along with the rocking function to achieve a deep seat tilt position. Excellent for napping!

Broda's Comfort Tension Seating™

The Key to Comfort is in Broda's Strapping! Memory retention allows straps to return to original shape within seconds.

- Redistributes pressure helping to prevent skin breakdown
- Creates air flow for heat and moisture exchange
- Contours to the body for long term sitting comfort
